

REAL WORLD TESTING PLAN TEMPLATE

BACKGROUND & INSTRUCTIONS

Under the ONC Health IT Certification Program (**Certification Program**), health IT developers are required to conduct Real World Testing of their certified health IT (45 CFR 170.405). The Office of the National Coordinator for Health Information Technology (ONC) issues Real World Testing resources to clarify health IT developers' responsibilities for conducting Real World Testing, to identify topics and specific elements of Real World Testing that ONC considers a priority, and to assist health IT developers in developing their Real World Testing plans.

Health IT developers have maximum flexibility to develop innovative plans and measures for Real World Testing. As developers are planning how they will execute Real World Testing, they should consider the overall complexity of the workflows and use cases within the care settings in which they market their certified health IT to determine the approaches they will take. This Real World Testing plan template was created to assist health IT developers in organizing the required information that must be submitted for each element in their Real World Testing plan. While the use of this template is voluntary, health IT developers may find it useful in preparing their Real World Testing plans. Health IT developers must submit one plan for each year of Real World Testing (see resources listed below for specific timelines and due dates). ONC does not encourage updating plans outside the submission timeline and will not post updates on the Certified Health IT Product List (CHPL). If adjustments to approaches are made throughout Real World Testing, the health IT developer should reflect these adjustments in their Real World Testing results report. ONC expects that the Real World Testing results report will include a description of these types of changes, the reasons for them, and how intended outcomes were more efficiently met as a result. **While every effort has been made to ensure the accuracy of restatements of 45 CFR Part 170, this template is not a legal document. The official program requirements are contained in the relevant laws and regulations. This resource should be read and understood in conjunction with the following companion resources, which describe in detail many of the Program requirements referenced in this resource.**

- [Real World Testing—What It Means for Health IT Developers – Fact Sheet](#)
- [Real World Testing Resource Guide](#)
- [Real World Testing Certification Companion Guide](#)

Health IT developers should also review the following regulatory materials, which establish the core requirements and responsibilities for Real World Testing under the Certification Program.

- 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program final rule, [85 FR 25642](#) (May 1, 2020) (**ONC Cures Act Final Rule**)
 - [Section VII.B.5](#) — “Real World Testing”
- Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing Final Rule, [89 FR 1192](#) (March 11, 2024) (**HTI-1 Final Rule**)
 - [Section III.E](#) — “Real World Testing”

TEMPLATE INSTRUCTIONS

The following template is organized by elements required to be submitted in the Real World Testing plan. Each section provides a field for submitting responses and/or explanations for how the health IT developer will address each required element in their Real World Testing approach. These fields serve as a foundation of information required for developing a Real World Testing plan and can be expanded with additional rows or columns to address the specific needs of the Real World Testing plan being submitted.

GENERAL INFORMATION

Plan Report ID Number: [For ONC-Authorized Certification Body use only]

Developer Name: Renvio

Product Name(s): Clarity

Version Number(s): 23

Certified Health IT Product List (CHPL) ID(s): 15.04.04.3089.Clar.23.02.1.230913

Developer Real World Testing Plan Page URL: <https://www.gorenvio.com/disclaimers>

JUSTIFICATION FOR REAL WORLD TESTING APPROACH

Provide an explanation for the overall approach to Real World Testing, including an outline of the approach and how data will be used to demonstrate successful Real World Testing.¹

All measures should reasonably align with the elements within a Real World Testing plan, the scope of the certification, the types of settings in which the certified health IT is marketed, and other factors relevant to the implementation of the certified Health IT Module(s). The justification should reflect how each element within the plan is relevant to the developer's overall strategy for meeting the Real World Testing Condition and Maintenance of Certification requirements.

Note: A single Real World Testing plan may address multiple products and certification criteria for multiple care settings.

Renvio's EMR system is providing services to hemodialysis treatment facilities. For this reason, the Real-World Testing plan will apply to this specialty care setting. Since the case management system does support the export of EHI, the criterion, § 170.315(b)(10) Electronic Health Information export will be included in the mentioned testing plan.

Renvio will engage with healthcare providers across different setting, ensuring conformance to the certification standards, and tracking the compliance of performance metrics. This test will encompass single-patient and population-level EHI exports.

STANDARDS VERSION ADVANCEMENT PROCESS (SVAP) STANDARDS UPDATES

Voluntary standards updates must be addressed in the Real World Testing plan. Real World Testing plans must include all certified health IT updated to newer versions of standards prior to August 31 of the year in which the updates were made.

Describe approach(es) for demonstrating conformance to all certification requirements using each standard to which the health IT is certified. List each version of a given standard separately. For each version of a standard submit the following:

- ✓ Identify standard versions
- ✓ Indicate what certification criteria in which product(s) has been updated
- ✓ If reporting for multiple products, identify the certification criteria that were affected by the update for each of the associated products
- ✓ CHPL ID for each Health IT Module
- ✓ Date notification sent to ONC-ACB
- ✓ Date notification sent to customers
- ✓ Method used to demonstrate conformance with updated standard(s)
- ✓ Measurement(s)/metric(s) associated with Real World Testing

Standard (and version)	N/A
Updated certification criteria and associated product	N/A
Health IT Module CHPL ID	N/A
Date of ONC ACB notification	N/A
Date of customer notification	N/A
Conformance method and measurement/metric(s)	N/A

MEASUREMENT(S)/METRIC(S) USED IN OVERALL APPROACH

Each plan must include at least one measurement/metric that addresses each applicable certification criterion in the Health IT Module’s scope of certification. Describe the method for measuring how the approach(es) chosen meet the intent and purpose of Real World Testing.

For each measurement/metric, describe the elements below:

- ✓ Description of the measurement/metric
- ✓ Associated certification criteria
- ✓ Justification for selected measurement/metric
- ✓ Care setting(s) that is addressed
- ✓ Expected outcomes

Description of Measurement/Metric

Describe the measurement(s)/metric(s) that will be used to support the overall approach to Real World Testing.

Measurement/Metric	Description
(i)(A) Create an export file (Single Patient)	Count the number of times the generate a single-patient export file for each care setting was successfully performed.
(i)(B) Execute at any time	List the dates and time the generate patient export was executed to validate it can be done at any time.
(i)(C) Limit ability of users who can create export	Validate that users who executed this export functionality match the list of pre-configured user groups.
(i)(D) Electronic and computable format	The export file will be generated in an electronic and a computable format. (e.g. CCD, CSV)
(ii)(A) Create an export file (Patient Population)	Count the number off times the generate a multiple-patient export file for each care setting was successfully performed.

Associated Certification Criteria

List certification criteria associated with the measurement/metric. If conformance to the criteria depends on any Relied Upon Software, this should be noted in your Real World Testing plan for any metrics that would involve use of that software in testing.

Measurement/Metric	Associated Certification Criteria	Relied Upon Software (if applicable)
(i)(A) Create an export file	§170.315(b)(10) EHI export – Single patient EHI export	N/A
(i)(B) Execute at any time		N/A
(i)(C) Limit ability of users who can create export		N/A
(i)(D) Electronic and computable format		N/A
(ii)(A) Create an export file	§170.315(b)(10) EHI export – Patient population EHI export	N/A

Justification for Selected Measurement/Metric

Provide an explanation for the measurement/metric selected to conduct Real World Testing.

Measurement/Metric	Justification
(i)(A) Create an export file (Single Patient)	Clarity can generate export file(s) regarding a single patient’s electronic health information. The metric will provide information of the type of data exported and frequency of usage.
(i)(B) Execute at any time	Clarity allows users to execute this capability at any time without developer assistance.
(i)(C) Limit ability of users who can create export	Clarity restricts the access to this capability only to a pre-configured group of users.
(i)(D) Electronic and computable format	Clarity must generate the export file(s) in an electronic and computable format.
(ii)(A) Create an export file (Patient Population)	Clarity can also generate export file(s) regarding a patient population electronic health information. The metric will provide information of the type of data exported and frequency of usage.

Care Setting(s)

The expectation is that a developer’s Real World Testing plan will address each type of clinical setting in which their certified health IT is marketed. Health IT developers are not required to test their certified health IT in every setting in which it is marketed for use. Developers should address their choice of care and/or practice settings to test and provide a justification for the chosen approach.

Note: Health IT developers may bundle products by care setting, criteria, etc. and design one plan to address each, or they may submit any combination of multiple plans that collectively address their products and the care settings in which they are marketed

List each care setting which is covered by the measure and an explanation for why it is included.

Care Setting	Justification
Outpatient Care	Out-patient care setting that supports ongoing dialysis treatment.
Inpatient Care	In-patient care setting that supports long-term dialysis treatment.

Expected Outcomes

Health IT developers should detail how the approaches chosen will successfully demonstrate that the certified health IT:

- 1) is compliant with the certification criteria, including the required technical standards and vocabulary codes sets;
- 2) is exchanging electronic health information (EHI) in the care and practice settings for which it is marketed for use; and/or,
- 3) EHI is received by and used in the certified health IT.

(from 85 FR 25766)

Not all of the expected outcomes listed above will be applicable to every certified Health IT Module, and health IT developers may add an additional description of how their measurement approach best addresses the ongoing interoperability functionality of their product(s). Health IT developers could also detail outcomes that should not result from their measurement approach if that better describes their efforts.

Within this section, health IT developers should also describe how the specific data collected from their Real World Testing measures demonstrate expected results. Expected outcomes and specific measures do not necessarily have to include performance targets or benchmarks, but health IT developers should provide context for why specific measures were selected and how the metrics demonstrate individual criterion functionality, EHI exchange, and/or use of EHI within certified health IT, as appropriate.

Measurement/Metric	Expected Outcomes
(i)(A) Create an export file (Single Patient)	A successful EHI export for a single patient, ensuring data consistency and accuracy.
(i)(B) Execute at any time	A successful EHI export from a user at any time without developer assistance.
(i)(C) Limit ability of users who can create export	A successful EHI export from an identified user by the authentication process.
(i)(D) Electronic and computable format	A successful EHI export with an electronic and computable format.
(ii)(A) Create an export file (Patient Population)	A successful Electronic Health Information (EHI) export for a patient population, ensuring data consistency and accuracy across the patient records.

SCHEDULE OF KEY MILESTONES

Include steps within the Real World Testing plan that establish milestones within the process. Include details on how and when the developer will implement measures and collect data. Key milestones should be relevant and directly related to expected outcomes discussed in the next section.

For each key milestone, describe when Real World Testing will begin in specific care settings and the date/timeframe during which data will be collected.

Key Milestone	Care Setting	Date/Timeframe
Beginning of data collection form Clarity application	Begin collecting real word testing data for EHI export.	January 1 st , 2025
Ending of data collection.	End of data collection for EHI export; end of validation period.	July 1 st , 2025
Analyze the data and present a report for further publication in the company portal.	Analyze the data & create a report for Real World testing report.	January 31 st , 2026

ATTESTATION

The Real World Testing plan must include the following attestation signed by the health IT developer authorized representative.

Note: The plan must be approved by a health IT developer authorized representative capable of binding the health IT developer for execution of the plan and include the representative's contact information.ⁱⁱ

This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
