

BUILT FOR HOW DIALYSIS CLINICS WORK

The Kidney Care Cloud

Unifying clinical workflows, operational insight, and billing so teams can focus on patient care and clinic performance.

Dialysis teams perform extraordinary work every day. But too often, the systems surrounding that work create friction instead of support. Information is scattered. Workflows are fragmented. Leaders must piece together the full picture of their clinic from multiple systems and reports.

Renvio developed the Kidney Care Cloud to transform this challenging environment.

The platform brings clinical workflows, operational visibility, revenue performance, and patient engagement together in one dialysis-specific system designed around how dialysis clinics actually operate. When the systems around the clinic finally work together, teams gain the clarity they need to focus on patient stability and consistent clinic performance.

From Workarounds To What Works Well

More than 1,000 dialysis organizations use Renvio's Kidney Care Cloud to support clinical documentation, operations, and billing workflows. Across those clinics, teams consistently report measurable improvements.

10–20% Narrower Variance

In end-of-month revenue, giving leaders more predictable financial visibility.

5–10 Mins Saved

Per patient per day on documentation and treatment tracking.

20–30% Reduction

In documentation errors through clearly structured treatment documentation.

1–2 Weeks Faster

Onboarding because the system mirrors how clinics actually deliver care.

~20% Improvement

In clean claim readiness; 10–15% less billing rework.

AI That Helps Clinics See What Matters Earlier

The Kidney Care Cloud incorporates artificial intelligence to help dialysis teams recognize patterns that are difficult to detect through manual review alone.

AI HELPS CLINICS:

- ✓ Identify patients who may be at higher risk of hospitalization or instability
- ✓ Highlight operational trends across clinics that may affect performance
- ✓ Surface billing or documentation issues earlier before they affect reimbursement

These capabilities are designed with the needs of clinicians at the forefront, supporting them as they care for their patients.

THE KIDNEY CARE CLOUD

Serving Dialysis Clinics at Every Step

From daily patient care through reimbursement and long-term engagement, the Kidney Care Cloud connects every part of the clinic. When teams can see what is happening earlier and respond sooner, they gain stronger clinical outcomes and more predictable financial performance.

Dialysis Manager

CLINICAL WORKFLOWS DESIGNED FOR DIALYSIS CARE

Dialysis Manager is the core clinical workflow solution within the Kidney Care Cloud. It supports the daily work of dialysis teams including documentation, rounding, orders, treatment tracking, and interdisciplinary coordination.

The result is a clinical environment where teams can focus more attention on patient stability and care.

● CLINICS REPORT:

- 🕒 **5 to 10 mins** saved per patient per day
- 📄 **20 to 30%** fewer documentation errors
- 🕒 **1-2 weeks** faster onboarding

Billing Manager

REVENUE CYCLE SOFTWARE BUILT FOR DIALYSIS

Billing Manager connects billing workflows directly to the clinical and operational activity captured within the platform.

CLINICS REPORT:

- **~20%** improvement in clean claim readiness
- **10-15%** reduction in billing rework
- **10-20%** improvement in revenue forecasting

When clinical documentation flows directly into billing, the result is cleaner claims, fewer denials, and more predictable revenue.

Renvio Clinic Insights

OPERATIONAL & PREDICTIVE VISIBILITY

Clinic Insights brings operational, clinical, and financial signals together so leaders can understand what is happening in their clinics more quickly.

Organizations report that core operational and financial questions can be answered in minutes instead of hours or days.

By reducing time spent gathering information across multiple sources, leaders can focus on the areas that matter most to clinic performance.

Renvio Billing Services

DIALYSIS-FOCUSED REVENUE CYCLE EXPERTISE

Some clinics choose to partner directly with Renvio's revenue cycle specialists for additional support, providing dialysis-specific expertise in claims processing, denials management, and reimbursement optimization.

CLINICS REPORT:

- **80-90%** reduction in internal billing workload
- Average AR of about **38 days**
- More consistent cash flow and oversight

When billing is handled by specialists who understand dialysis reimbursement, clinics can focus on patient care — not administrative complexity.

Patient Portal

STRENGTHENING CONNECTIONS

The Patient Portal extends the Kidney Care Cloud to patients by providing a secure digital space where clinics and patients can communicate and share information more easily.

Through messaging, shared information, and engagement tools, dialysis teams can maintain stronger communication and support continuity of care.

When patients have easier access to their care team and their information, the relationship between clinic and patient becomes stronger — between visits, not just during them.
